

**REMARKS/ARGUMENTS**

Applicants have by this Amendment submitted a Supplemental Information Disclosure Statement on which are listed the two patents cited in the specification.

By this Amendment, Applicants have submitted a new abstract of less than 150 words.

Applicants have amended claim 1, element (c) as requested by the Examiner, except that in lines 3 and 4, the Examiner wanted the phrase "axially opposite end of said member" to have inserted therein the word "second" before the word "member". However, it should be noted that at the beginning of element (c), the recitation is "one of said first and second members" and therefore, it would be illogical (and too restrictive) to specifically recite that the angled passage (86) has its inner end in communication with the opposite end of the second member when in fact within the scope of claim 1, element (c), the angled passage (86) could be wholly defined by either the first member (52) or the second member (64).

By this amendment, Applicants have made the changes requested by the Examiner in claims 2 and 4. Applicants believe that the case is now in condition for allowance, and such action is earnestly solicited.

Respectfully submitted,

L. J. Kasper
